## Application of **ChafeZone®** Stick Product

- Remove cap and roll up the desired amount of ChafeZone®
- Swipe off the desired amount and apply the ChafeZone® to the necessary area(s)
- Replace cap

\*\*\*When used in a multi-person setting such as an athletic training room, nursing home, etc. use exam gloves when removing the ChafeZone® from the container. Discard and replace the exam gloves after each subsequent individual application.

ChafeZone® is formulated as a paste and not a solid. If applied as a solid it will break off or “clump” off as some say. The consistent feedback that we are hearing from a number of athletes, amputees, cyclists, off-road enthusiasts and truck drivers is that it is a 1x/day application, is not messy, does not stain clothing and has durability against perspiration, chlorine and salt water.

ChafeZone® was developed at the request of Naval Special Warfare Development Group back in 2002 to help prevent the numerous skin breakdown issues they were experiencing with increased and/or extended wearing of wetsuits.
