

Member Tested and Recommended Program

Friday, August 27, 2010

Thank you for participating in our “Member Tested and Recommended Program.” The ChafeZone has been tested and recommended by the members of the National Tactical Officers Association. Your overall score was a **4.36**. The NTOA Member Tested and Recommended logo may be used solely on the specific product that was tested.

Attached with this letter, is the Member Tested and Recommended Logo which can be used on all marketing pieces for this product. Also attached is a copy of the complete reviews that your company can use as well.

Press releases written regarding this product review must be emailed to NTOA for review before release.

Since the review is completed, it will now be added to online Member Tested product database. To make the review complete, please send us a digital image of the product that has been tested. This is now listed on the NTOA’s Member Tested and Recommended online database and review will soon be published in *The Tactical Edge* journal.

Please contact Corey Luby at advertising@ntoa.org if you would like to advertise in *The Tactical Edge* journal. Once again, thank you for participating in the Member Tested and Recommended Program©.

Thank you,

Corey Luby

I was sent a bottle of Med Zone's "Chafe Zone" to test. According to the product label, this product is for "protection against chafing and blisters."

This product is packaged in a stick deodorant type container. This product is in a solid form, but changes to a viscous fluid when exposed to heat. To apply, expose the amount you need, remove the product with your fingers, and apply to the body area. This product applies easily, and keeps a viscous state throughout use. There is a very light, almost non-existent, odor.

My team recently had a training evolution which took us into the mountains. The temperature averaged in the mid 90's. Prior to the evolutions starting, I applied Chafe Zone to my buttocks / inner thigh area. Despite the sweat and dirt accumulation to my body, I did not sustain any friction or chafing injuries (aka - "monkey butt"). I applied this product once that day, and did not need to re-apply. This product washed off easily at the end of the day. There was no staining to my clothing.

On the negative side, however, this product readily goes into a liquid state once heat is applied. I kept this product in my rucksack throughout the day. At the end, I noticed the product had leached out, covering the contents of that rucksack pocket with product. If you plan to use this product in areas with high heat, you may want to carry it in a "zip loc" style plastic bag.

I have used this product in a variety of other ways, to include running and cycling. I did not experience any hot spots anywhere on my feet while running, or to my buttock/inner thigh area when applied to my cycling shorts chamois.

Great product! Easy application, long lasting, no odor, non-staining... it works! No more blisters from working long days in the water. No more chafe or squeeze from a wetsuit too tight or on too long. The discomfort of sitting in a non air-conditioned vehicle for hours on end is just about gone, at least what I am sitting on. No more "Monkey Butt". My entry vest stopped chafing my armpits and tearing me up in the heat. I wish I'd found about this sooner. Recommended, Hell yeah!

The Chafe Zone provided good protection as well as decent relief from chafing and the associated redness. One application was enough to provide protection for an extended period of time. This product wasn't overly greasy and rolled on similar to stick deodorant. I am a runner and found the Chafe Zone to be just effective as any products that are already on the market. I

found this product to be good enough for everyday usage and would recommend it for those of you who may be prone to chafing and blisters.

The Med Zone Chafe Zone is an excellent product, especially for operators working in hot and humid climates. The Chafe Zone did provide instant relief when applied and worked for several hours after the initial application. For hygiene reasons, I would highly recommend to Med Zone that this product be made into a smaller package, something maybe the same size as a glue stick tube, so that each individual operator can store it on his / her person without having to be passed around.
